Exercise 1: Prefixes and Closure I

Part A

 $P \subseteq \operatorname{cl}(P)$

Solution

Let $\omega \in P$, then $\operatorname{pref}(\omega) \subseteq \operatorname{pref}(P)$ trivially. Since $\operatorname{pref}(\omega) \subseteq \operatorname{pref}(P)$ is the predicate for closure, then we can conclude $\forall \omega \in P \to \omega \in \operatorname{cl}(P)$, thefore $P \subseteq \operatorname{cl}(P)$.

Part B

 $\operatorname{pref}(\operatorname{cl}(P)) = \operatorname{pref}(P)$

Solution

If we prove both $\operatorname{pref}(\operatorname{cl}(P)) \subseteq \operatorname{pref}(P)$ and $\operatorname{pref}(P) \subseteq \operatorname{pref}(\operatorname{cl}(P))$, then we can conclude $\operatorname{pref}(\operatorname{cl}(P)) = \operatorname{pref}(P)$.

Direction 1: $\operatorname{pref}(\operatorname{cl}(P)) \subseteq \operatorname{pref}(P)$

Let $\omega \in \operatorname{pref}(\operatorname{cl}(P))$, then $\exists \sigma \in \operatorname{cl}(P) \to \omega \in \operatorname{pref}(\sigma)$. By the definition of closure, $\forall \sigma \in \operatorname{cl}(P) \to \operatorname{pref}(\sigma) \subseteq \operatorname{pref}(P)$. Hence, $w \in \operatorname{pref}(P)$. Which concludes that $\forall \omega \in \operatorname{pref}(\operatorname{cl}(P)) \to \omega \in \operatorname{pref}(P)$.

Direction 2: $\operatorname{pref}(P) \subseteq \operatorname{pref}(\operatorname{cl}(P))$

Let $\omega \in \operatorname{pref}(P)$, then $\exists \sigma \in P \to \omega \in \operatorname{pref}(\sigma)$. By proof in part a, we can claim $\forall \sigma \in P \to \sigma \in \operatorname{cl}(P)$. Therefore, $\omega \in \operatorname{pref}(P) \to \omega \in \operatorname{pref}(\operatorname{cl}(P))$.

Your line of thinking is correct, but the way you wrote it down is not syntachally correct. -0.5

For example: For G cl(P) -> prel (or) < prel (P)

is an impuration with not precondition (only a 90

is an implication with no precondition (only a quantitier), thus makes no syntactical sense.

To be safe in the exam, expren as much in wards as possible

Exercise 2: Prefixes and Closure II

$$P_{1} = \{A_{0}A_{1}^{\epsilon(2^{4r})^{0}} \mid \exists S \subseteq \mathbb{N} \cdot (|S| = 1 \land \forall i \in S a \in A_{i}^{\vee})\}$$

$$P_{2} = \{A_{0}A_{1}^{\epsilon(2^{4r})^{0}} \mid \forall i^{\epsilon \mathbb{N}} (a \in A_{i} \rightarrow b \in A_{i+1})\}$$

$$P_{3} = \{A_{0}A_{1}^{\epsilon(2^{4r})^{0}} \mid \exists i^{\epsilon \mathbb{N}} (\forall j^{\epsilon \mathbb{N}} (j \geq i \rightarrow a \notin A_{j}))\}$$

$$P_{4} = \{A_{0}A_{1}^{\epsilon(2^{4r})^{0}} \mid a \in A_{0} \land \exists i^{\epsilon \mathbb{N}} a \in A_{i}\}$$

$$(\vee)$$

Part B

$$\begin{array}{c} \mathbf{B} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i & i \\ 0 & i \end{smallmatrix} \right\} }_{\in (l^{N})^{+}} \\ & \underbrace{ \left\{ \begin{smallmatrix} 0 & i &$$

Part C

$$\operatorname{cl}(P_1) = \{A_0 A_1 \dots \mid \exists S \subseteq \mathbb{N} \cdot (|S| \le 1 \land \forall i \in Sa \in A_i^{\vee})\}$$

$$\operatorname{cl}(P_2) = \{A_0 A_1 \dots \mid \exists S \subseteq \mathbb{N} \cdot (a \in A_i \to b \in A_{i+1})\}$$

$$\operatorname{cl}(P_3) = \{A_0 A_1 \dots \mid \operatorname{true}\}$$

$$\operatorname{cl}(P_4) = \{A_0 A_1 \dots \mid a \in A_0\}$$

$$\operatorname{cl}(P_4) = \{A_0 A_1 \dots \mid a \in A_0\}$$

$$\operatorname{cl}(P_4) = \{A_0 A_1 \dots \mid a \in A_0\}$$

95/12/

Exercise 3: Safety & Liveness Properties

Part A

 P_1

- Is an invariant.
- Invariation condition: $a \notin S$. The invariant condition is a propositional logic formula ϕ over the set of atomic propositions, here {a,b}

 P_2

- Not an invariant.
- w is a single trace, not a set. Just write that w contains only lay. • Example trace: $(w = \{a\}^{\omega}) \notin P_2$. However, $\forall \sigma \in w \cdot \sigma = \{a\}$, and we can give trace $\{a\}\{b\}^\omega\in P_2$ as a counter example, since the set for also occurs in daggboom, -o.

 P_{3}

- Is an invariant.
- Invariant condition: $a \in S \to b \in S$. $\phi : b \to a 0.5$

 P_4

• Not an invariant.

w contains only flog

• Example trace: $(w = \{b\}^{\omega}) \notin P_4$. However, $\forall \sigma \in w \cdot \sigma = \{b\}$, and we can give trace $\{b\}\{a\}^{\omega} \in P_2$ as a counterexample, since the set 565 also

occurs in Ebstazw -0.5 Part B

 P_1

- Is a safety property. $\text{• Set of bad prefixes: BadPref} = \{A_0A_1...A_n^{\vee}|\ \exists i\in\{0,...,n\}\cdot a\in A_i\}.\ \checkmark$

 P_2

- Not a safety property.
- Example trace: $\left(\sigma=\{a\}^\omega\right)\in\left(2^{\mathrm{AP}}\right)^\omega\smallsetminus P_2.$ But $\forall w\in\mathrm{pref}(\sigma),$ we can always extend it with $\sigma\{b\}^w \in P_2$ so no σ can be a bad prefix. \vee

 P_{2}

- Is a safety property.
- Set of bad prefixes: 6(2 AP)+ $\operatorname{BadPref} = \{A_0 A_1 ... A_n^{\mathsf{V}} | \exists i \in \{0, ..., n\} \cdot b \in A_i \land a \notin A_i\}. \mathsf{V}$

 $P_{\scriptscriptstyle A}$

- Is a safety property.
- Set of bad prefixes: 6(2 AP)+ $\operatorname{BadPref} = \{A_0 A_1 ... A_n^{\text{local}} | \exists S \subseteq \{0, ..., n\} \cdot |S| > 1 \land (\forall i \in S \cdot b \in S_i)\} \text{ local}$

Part C

P_1

- Is not a liveness property.
- Example bad prefix: $\{a\}$. $\forall w \in (2^{AP})^{\omega} \cdot (\{a\}w) \notin P_1$.

P_2

- Is a liveness property.
- We can extend any finite trace with $\{b\}^{\omega}$. $\forall w \in (2^{AP})^* \cdot w\{b\}^{\omega} \in P_2$.

P_3

- Is not a liveness property.
- Example bad prefix: $\{b\}$. $\forall w \in (2^{AP})^{\omega} \cdot (\{b\}w) \notin P_3$.

P_4

- Is not a liveness property.
- Example bad prefix: $\{b\}\{b\}$. $\forall w \in \left(2^{\mathrm{AP}}\right)^{\omega} \cdot (\{b\}\{b\}w) \notin P_4$.
